

SDG Team-Building Simulation

The SDGs simulation is a unique and motivational activity based on the United Nations' 2030 sustainability development goals (SDGs) and is focused on real-life challenges by balancing the economy, environment, and society.

Through this activity, participants work collaboratively and are encouraged to think about their overall team dynamic and how their actions apply in real-world/real-workplace settings. Participant's natural curiosity about extremely complex issues become heightened.

This team-building activity is designed as a multi-player, in-person, card-based game that simulates managing the "real world" into the year 2030 by completing projects with resources such as time, money, and principles. The experience results in a powerful and impactful social phenomenon that gets everyone talking, planning, and thinking deeply about a sustainable future.

Team-Building Outcomes:

- Build camaraderie through team-work
- Build confidence through interactions
- Cognitive and Critical Thinking skills
- Collaboration skills
- Communication skills
- Conflict Resolution & Negotiation skills
- Problem-solving & Planning skills
- Recognize impact of Unconscious Biases
- Thoughtful Leadership skills

Participants will gain direct experience in co-creating a sustainable world while gaining a better understanding of different work and learning styles and points-of-view. Discussions about leading inclusively and recognizing unconscious bias are woven into the program in order to enhance key take-aways.

This high-stakes, animated, action-packed activity is one that your participants will be talking and thinking about for weeks on end!

What people are saying:

"A very well-conceived, excellently facilitated thought-provoking and fun event. Stimulated meaningful conversations with a diverse mix of interesting people and identification of actions each of us can take in our personal and professional lives."

With the use of resources such as time, money, and principles, teams are given projects which they need to accomplish by balancing the economy, environment, and society. Group outcomes are different each time the simulation is played which speaks not only to the cultural make-up of the team but also to their leadership and communication styles.
